

Syntax Analysis

• 2.12

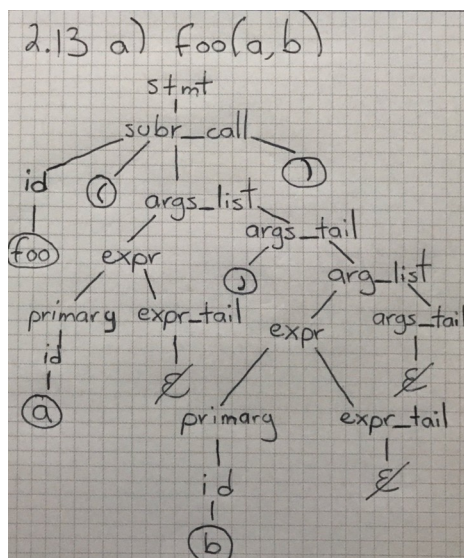

- a) The grammar generates a language (or a string) of a's and b's combined. It can be only a's, or start with an "a" and then create a combination of a's and b's, or it can start with a "b" but it can not be only b's, which means that eventually a "b" will end up being followed up by an "a".

b)
